

REMOTE PATIENT MONITORING

BETTER CARE BETWEEN VISITS

Two service models. One powerful platform.
Better outcomes between visits, and the
revenue follows.

RPM ESSENTIALS

RPM COMPLETE

THE PROBLEM

BETWEEN VISITS, CLINICIANS ARE FLYING BLIND

Chronic disease patients are seen for an average of 18 minutes, every three to six months. Blood pressure and oxygen levels can fluctuate before the next appointment. Glucose can trend dangerously for weeks. Weight changes signaling a CHF exacerbation go unnoticed until an ER visit.

Remote patient monitoring creates a clinical safety net that works every day—not just on appointment days.

Follow-Up Visits

When readings fall outside thresholds, providers can act quickly—scheduling a follow-up before a condition escalates.

Medication Adjustment

Real-time BP or glucose data enables timely medication adjustments without waiting for the next office visit.

Diagnostic Orders

Threshold alerts prompt clinically appropriate orders—EKGs, Holter monitors, stress tests—before a patient deteriorates.

Hospital Admissions

Providers can initiate direct hospital admissions—avoiding preventable ER visits and reducing readmission risk.

Emergency Reduction

Proactive intervention means fewer emergency visits, lower readmission rates, and better chronic disease outcomes.

Billable Encounters

Proactive intervention creates additional billable encounters—office visits and diagnostics that would otherwise not occur.

18

MINUTES PER VISIT

Average face time with a chronic disease patient—every 3 to 6 months. RPM fills the gap every day in between

MULTIPLE DEVICES

Hypertension: Blood pressure cuff • CHF: Digital scale • Diabetes: Glucometer
COPD: Pulse oximeter • All cellular-connected, no Wi-Fi required.

THE OPPORTUNITY

THREE REVENUE STREAMS, ONE PROGRAM

ARIA Population Health generates Medicare revenue through three distinct streams. Most practices see approximately \$70 per enrolled patient, per month.

Five hundred patients at 40% enrollment would equate to \$14K–\$15K gross/month, or approximately \$168K+ per year.

Direct RPM Billing

Monthly CPT® reimbursements for device supply, monitoring time, and patient engagement.

MIPS & Quality Bonuses

RPM moves the needle on blood pressure control, HbA1c, and readmissions—the exact measures practices are already scored on.

Efficiency & Revenue

Earlier intervention generates billable encounters—follow-up visits, diagnostics, medication adjustments—that might otherwise not occur.

2026 CPT® Codes

Lower billing thresholds introduced in 2026 lead to higher reimbursements. Medicare is prioritizing remote patient monitoring.

Real-World Results

In a case study, one CGM client reported a 15% annual practice revenue increase after implementing ARIA Population Health.

Revenue Example

Practice revenue hinges on enrollment. With 500 Medicare patients, 40%–70% enrollment could generate an annual \$168–\$294k.

ENGAGEMENT

Mayo Clinic / Massachusetts General Hospital, 2025

Remote patient monitoring coupled with technology-enabled, guideline-directed care reduced total cost of care and utilization.

Uncontrolled hypertension costs ~\$2,500 per patient per year. Uncontrolled diabetes costs ~\$3,761 per patient per year.

Remote patient monitoring addresses both directly.

SERVICE TIERS

TWO MODELS, EVERY PRACTICE COVERED

Both tiers include cellular-connected devices shipped directly to patients. No Wi-Fi or smartphone required. The option for charge entry directly into your practice management system is available, too.

RPM ESSENTIALS

ARIA enables. Practice operates.
Flat rate per patient per month.

RPM COMPLETE

ARIA runs everything for a percentage rate—we only get paid when you do.

RPM ESSENTIALS DEVICES

ARIA supplies and ships devices—blood pressure cuffs, pulse oximeters, glucometers, digital scales. Pre-configured, no Wi-Fi needed.

RPM ESSENTIALS PLATFORM

Provider portal, dashboard, care plan templates, clinical protocols, compliance infrastructure, and nurse QA program support.

RPM ESSENTIALS YOUR TEAM LEADS

Practice staff manages enrollment, monitoring, engagement, and billing. ARIA provides training and compliance support.

RPM COMPLETE FULLY MANAGED

Our clinical team manages enrollment and devices, monitors readings, handles engagement and escalations, and delivers billing reports.

RPM COMPLETE MINIMAL IMPACT

Best for high-volume practices with limited bandwidth.

RPM COMPLETE NO-RISK PRICING

Percentage-based fee. We only get paid when your practice does. Pair with ARIA RCM Services for full billing management.

WHICH ONE IS RIGHT FOR ME?

RPM Essentials: My team will lead the program • Predictable, flat-rate pricing
RPM Complete: ARIA manages the service • No-risk pricing

EHR INTEGRATIONS

ARIA Population Health works as a stand-alone service with any EHR. Direct integration with CompuGroup Medical systems is included.

CASE STUDY

REAL PRACTICE, REAL RESULTS

"Patient feedback has been overwhelmingly positive; we have seen participation of 90% of patients enrolled. Because ARIA Population Health handles patient escalations, it has reduced our staff overhead between visits while at the same time increased our office visits by identifying patients in need of more immediate care than what would otherwise be anticipated."*
